

SLT Hand Scissor Lift Pallet Truck

The SLT has a maximum lift height of 800mm and a capacity of 1000kg.

Due to its scissor action, the SLT10 is designed for open bottomed pallets, with dimensions across the forks of 540x1140mm.

The unit is fitted with PU wheels for quieter movement and is an ideal solution for many piece work production lines, when the load is better raised. Not only can this improve operator efficiency, but it can help reduce back strain related injuries and down time.

The scissor lift unit also features a quick lift function, for when loads are 200kg or less.

Another safety feature of this high lift pallet truck, is that once the forks are raised above a certain height, a locking bar drops in place to prevent the truck moving

Conforms to CE safety standards and EN1757-4.

Specifications:

Minimum Fork Height: 85mm
Maximum Fork Height: 800mm
Capacity: 1000kg
Load Roller: 78x60mm
Steering Wheel: 200x50mm
Net weight: 110kg
