CT-12 FIXED TYPE SKATE

Moving Skates are also known as Machinery Skates, Transport Skates and Shifting Skates

Moving skates can be used wherever heavy objects need to be moved and make the movement much easier.

Heavy duty sealed bearings are used to spread the load and ensure ease of movement.

The load can be lifted using either a roller crowbar or a jack, allowing the skates to be easily positioned.

The CT range is fitted with PU wheels, which have steel centres and incorporate a sealed ball bearing.
