CTA12 Skates with Turntable

CTA12 has an 18 ton capacity and comes with a swivel top

When you have heavy equipment such as machinery to move, good quality moving skates can make the job that much easier, helping to keep productivity levels up and frustration levels down.

Moving Skates can be used when ever heavy objects need to be moved, to make the movement easier.

They use sealed ball bearing to spread the load and to ensure ease of movement.

The load can be lifted using either a jack or crowbar, allowing the skates to be easily positioned.
